WRITE IN INK—FILE TWO COPIES
APPLICATION FOR A BUILDING PERMIT
BRICK OR MASONRY BUILDING

Application is hereby made to the Building Department of the City of Oakland for permission to build a
one story one room, brick, ~~concrete~~, the Student House and Walks
at 6226 Coast Drive, Oakland

in accordance with the plans and specifications filed herewith,
and which plans and specifications are to be considered a part of this application. Entire cost of building
(this must include everything necessary for the complete construction of the building), \$ 1200.00

Building to be occupied as a

Size of lot by feet.

Size of proposed building 13 feet by 18 Extremes height of building 11 1/2 feet.

What class of building is proposed?

Is there any other building on the same lot? Yes - residence

Are piles or other special form of foundation to be used? No

Size of foundation 30' high footings

Exterior wall construction of Brick

Thickness of wall 12 1/2"

Height of wall to roof 7 1/2'

Interior construction of Brick and wood

Floor constructed of Brick over sand fill

Roof construction of Wood

Roof covering of Terra Cotta Tile

Is interior of building to be plastered? No

Are there any elevators? No

Is sidewalk space to be excavated? None

Is there a garage in the building? No

City Manager Permit Number

I hereby agree to save, indemnify and keep harmless the City of Oakland and its officers, employees and agents against all liabilities, judgments, costs and expenses which may in any wise accrue against the City in consequence of the granting of this permit, or from the use of occupancy of any sidewalk, street or sub-sidewalk, or otherwise by virtue thereof, and will in all things strictly comply with the conditions of this permit and provisions of the Ordinances of the City of Oakland.

* This certificate is a true and correct statement of the results of the inspection of the structure shown by diagram and is limited to the sub-structure unless otherwise specified. It covers those parts of the structure shown by diagram and is not intended to cover the entire structure. The inspector is not responsible for the condition of the structure at the time of inspection. The inspector is not responsible for the condition of the structure at the time of inspection. The inspector is not responsible for the condition of the structure at the time of inspection.

NO RESPONSIBILITY IS ASSIGNED FOR INFESTATIONS OR DAMAGE THAT CANNOT BE DETECTED BY VISUAL INSPECTION OF THE SUB-STRUCTURE UNLESS OTHERWISE NOTED.

EXAMINATION OF THE SUB-STRUCTURE REVEALED THE FOLLOWING CONDITIONS:

NO EVIDENCE OF WOOD DESTROYING PESTS OR ORGANISMS IN ACCESSIBLE AREAS OF THE SUB-STRUCTURE.

TERMITES ☒ FUNGUS ☒ BEETLES ☐ OTHER ☐

Indications of the above at several points, however, recent corrections have been made which have eliminated evidence for positive findings.

INFESTATION AND DETERIORATION AS FOUND IN THE SUB-STRUCTURE ARE PRIMARILY THE RESULT OF:

MOISTURE PENETRATION TO WOOD PARTS ☒ INSUFFICIENT VENTILATION ☒

Other: Cold joints between foundations and concrete floors or basement floor.

OUTLINE IN DIAGRAM BELOW REFERS SPECIFICALLY TO CONDITIONS IN THE SUB-STRUCTURE UNLESS OTHERWISE NOTED.

Notes: 1 - Some woodwork was found at base of chimney where water and wood contact existed beneath. However, more is required for proper elimination of water contact. 2 - Some findings of conditions along this wall cannot be made because of storage shutters.

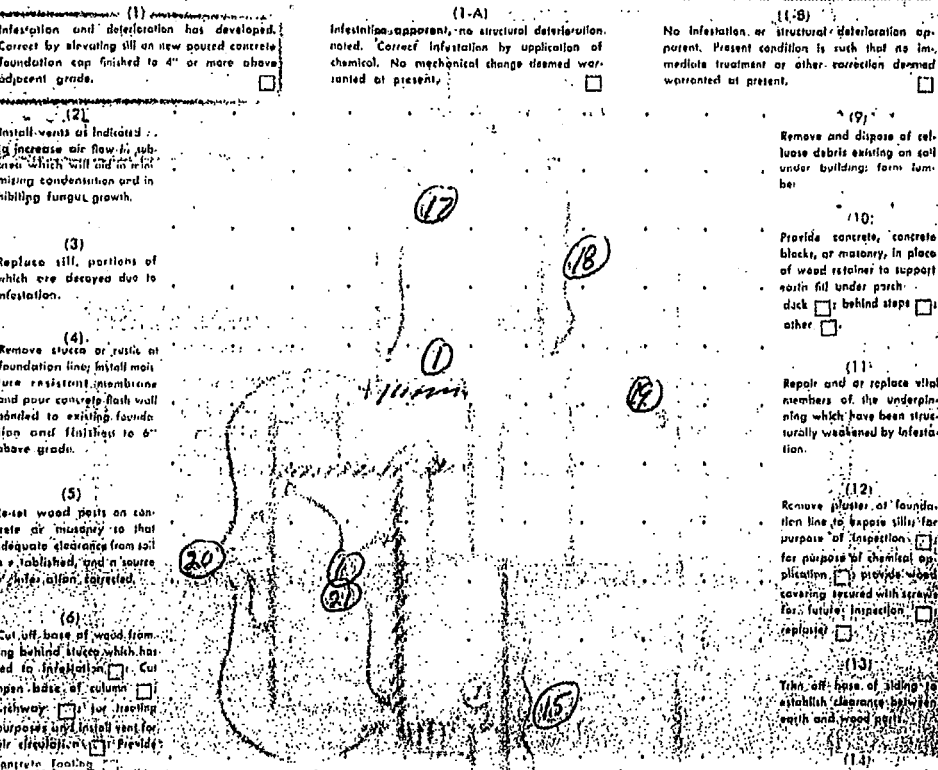

3 - Fungus existed along this retaining wall in the past but was removed. More treatment was applied. However, this is not a very good treatment for this type of infestation. Therefore, water treatment should be applied to wall.

4 - Some minor fungus infestation exists in joint ends at this point. However, structural weakness does not exist. This area and the entire front wall was treated with wood preservative. No more findings can be reported as a result of present treatment. However, it is felt that more are reasonably protected due to treatment of foundations at these points.

5 - These walls are finished and structural survey cannot be made. No more findings can be reported, however, foundation heights are well above grade which provides ample protection.

LEGEND: S - Subterranean Termites, F - Fungus Infestation, N.F. - No Foundation, V.R. - Ventilator Recommended, C.F. - Concrete Floor, I.C. - Insufficient Clearance for Access.

Wood sill on foundation rests below finish grade as noted. F.B.C.

17 - Some findings of condition along this wall cannot be made because of poor access.

18 - Some findings of condition along this remaining wall in the past but were not made. Some work was applied. However, this is not a very good treatment for this type of infestation. Chloroform, water emulsion should be applied to soil.

19 - Some minor fungus infestation exists in joint area at this point. However, structural weakness does not exist. This area and the entire front wall was treated with wood preservative. No true findings can be reported as a result of recent treatment. However, it is felt that members are reasonably protected due to step or L foundations at these points.

20 - These walls are finished and internal survey cannot be made. No true findings can be reported, however, foundation drains are well above grade which provides some protection.

LEADS
 1 - Substructure Termites
 2 - Fungus Infestation
 3 - No Foundation
 4 - Ventilation Recommended
 5 - Insufficient Clearance for Access

Wood fill on foundation rests below finish grade as noted "FBO"

(1) Infestation and deterioration has developed. Correct by elevating sill on new poured concrete foundation cap finished to 4" or more above adjacent grade.

(1-A) Infestation apparent, no structural deterioration noted. Correct infestation by application of chemical. No mechanical change deemed warranted at present.

(1-B) No infestation or structural deterioration apparent. Present condition is such that no immediate treatment or other correction deemed warranted at present.

(2) Install vents as indicated to increase air flow in sub area which will aid in minimizing condensation and inhibiting fungus growth.

(3) Replace sill, portions of which are decayed due to infestation.

(4) Remove stucco or finish at foundation line; install moisture resistant membrane and pour concrete flush with foundation and finish to 6" above grade.

(5) Re-set wood posts on concrete or masonry so that adequate clearance from soil is established, and a source of infestation corrected.

(6) Cut off base of wood framing behind studs which has led to infestation. Cut open base of column. Provide air circulation. Provide concrete footing.

(7) Cut-off base of door frame which is embedded below the floor surface and pack voids with concrete. This will eliminate moisture pocket and a source of infestation.

(8) Repair and/or replace members of porch deck which have been weakened by infestation. Repair and/or replace members of steps.

(8-A) Repair decayed non-functional members in step by Provide skeleton frame for support. Fill with concrete for support.

Remove and dispose of refuse debris existing on soil under buildings form lumber.

(10) Provide concrete, concrete blocks, or masonry, in place of wood retaining to support earth fill under porch deck behind steps or other.

(11) Repair and/or replace vital members of the underpinning which have been structurally weakened by infestation.

(12) Remove plaster at foundation line, to expose sills for purpose of inspection. For purpose of chemical application, provide wood covering covered with stucco for future inspection. replaster.

(13) Trim off base of siding to establish clearance between earth and wood parts.

(14) Correct earth and wood contact at base of steps by replacing, behind step with concrete.

(15) Trench and grade soil free of contact with wood parts on foundation.
